

## Assignment: Create a Personal Web Page

### Objective:

Build a personal web page using HTML and CSS that showcases a brief bio, hobbies, and other interesting details about yourself.

### Instructions:

#### 1. Create the HTML Structure:

- The webpage should have a simple structure using appropriate HTML tags.
- Include the following sections:
- **Header:** Your name and a small tagline (e.g., "Aspiring Web Developer").
- **Bio Section:** A brief paragraph about yourself (name, age, major, etc.).
- **Hobbies Section:** A list of your hobbies with images or icons.
- **Interesting Facts:** Use a <table> to showcase 3-5 fun facts or unique details about yourself.
- **Footer:** Your contact information (email, social media links).

#### 2. CSS Styling:

- Use external CSS to style your webpage.
- Add styling for the following:
- **Colors:** Choose a color scheme for your webpage.
- **Typography:** Set custom fonts and text sizes for headers and paragraphs.
- **Layout:** Use flexbox or grid to arrange the content of the page neatly.
- **Images/Icons:** Add relevant images or icons for hobbies, either through images or CSS background properties.

#### 3. Additional Requirements:

- Use proper HTML semantic tags (e.g., <header>, <section>, <footer>, <article>) where appropriate.
- Make the webpage accessible by adding alt text to images.
- Include at least one hyperlink (for example, a link to your social media page or portfolio).

### Deliverables:

- Submit the HTML and CSS files to your git repository
